EDITORIAL

Dear Friends,

let's turn our attention right to what is waiting for us in June. On May 25th, an amazing new European Union order came into effect dubbed the GDPR that will protect us all from the misuse of our personal data by simply burying us under a mountain of paperwork and a bunch of lawyer inspired legalese that no one will bother to read and also inundate some with massive amounts of mail. It carries with it a lot of criticism, mostly concerned with the fact that no one even can begin to understand all that crap and that there are various actions being taken in both quantity and quality that is inversely proportional to the understanding of said document. I recently saw an interview with Euro-commissioner Mrs. Jourova where she was attempting to explain the necessity of the order because it fundamentally regulates unregulated use of personal data, protects the general population against its misuse and related consequences; that it is basically an order in the name of the greater good which we should not fear, that will not weigh us down and bla bla bla. I don't want to take from her her optimism, but the module that we purchased and integrated into our e-shop, and which will be bugging you for your agreement in the use of your data, was certainly not free. And this is the point of my GDPR rant – be prepared for our need for your agreement. In the request there are some twelve pages (best guess) of crap about how we will be utterly responsible for and protective of your data and that we will be doing all this better and more efficiently than ever before. But these are just words. We will essentially be doing everything as it was done before, because we have already always done this with due diligence without the need of any GDPR. In short, my friends, when the dialogue box jumps out at you asking for your agreement, please...just click it so we can all get on with our lives and turn our attention to model kits and accessories for them. So....on to something more useful...

Perhaps some will remember the introduction of the LööK Line at the Nuremberg Toy Fair. If not, and you are unfamiliar with this line, you will find your

answer in today's newsletter. Illustrations of the first two sets in the line can be found in the following pages. The fruition of this lines is the result of the melding of some complex technologies that have been in operation at Eduard over the past few months and, indeed, years. Each LööK product will be made up of two main components: a resin instrument panel and steel photoetched seatbelts. Both parts will be in colour and besides having printed dial faces, the instruments on the panel will be covered by a lens. As mentioned, the belts are made from steel, are in colour as well, and are weathered. Some modellers have indicated that they felt that the buckles were somewhat subdued, so these have been adjusted to become more massive. Both components can, of course, be made of more individual parts. The instrument panels are designed to be glued into the model without any modifications to either the kit or the resin. For now, items in the LööK line will be released in 1/32nd scale and the technology required to drop that down to 1/48th is being readied. The test shots there are looking quite good. And I am hopeful that by the fall, we will see this in 1/48th, too. That would be the scale that would probably pull its own weight in this line. Smaller scales at this point are not yet achievable and I have doubts about it becoming otherwise in the near future. The first two sets being introduced today are designed for the Revell P-51D-5 Mustang and the Tamiya F4U-1A, both in 1/32nd.

On an organizational level, the LööKs fall under the Brassins category with their own catalogue numbers and will as such fall under their own sub-heading in the price listings. I hope that's clear. And while on the topic of Brassins, I would like to point your attention to a few items set for June in this line. For example, the 1/72nd scale BigSin for the Spitfire Mk.VIII will be useful to most on some level, for the kit that was released in April. That kit

can still be considered a current new item. Also in the Brassin line, you'll find RS-2US missiles and UB-16 rocket launchers, both in 1/72nd scale and both intended for the MiG-21. Both of these sets will be released as two separate versions where one set includes the launch rails and pylons while the other is focused on the weapon and the rail. It is in this style that missile sets, designed for the MiG-21, will be designed. In 1/32nd scale, there are four new sets for the Fw 190A-8 from Revell, including an expanded, or perhaps better worded, a resin kit, of the engine. In 1/48th scale, we are continuing with the release of items for the Tamiya Bf 109G-6, this time a small bit in the way of the tropical filter and along with it the cockpit for the G-6/U4, which were aircraft armed with a 30mm cannon firing through the prop hub. Set 648405, the Bf109G-6 Cockpit, 1/48th, is designed for the G-6s that were armed with a 20mm cannon. And incidentally, the cockpit for the G-6/U4, the 30mm armed version, is not included as an option in the Tamiya kit and this set thusly opens up more possibilities of attractive markings for it. It's worth knowing, I think. There are also a few smaller items being released for the Typhoon Mk.Ib in the shape of wheels and exhausts.

That brings us to models, among which the star of the month will likely be the Typhoon Mk.Ib. It is in 1/48th scale and based around Hasegawa plastic. This is complemented by castings, masks, photoetched brass and decals from Eduard. The decals are actually printed in Italy by Cartograf. The resin castings include the dust tropical filter, the horizontal tail surfaces that were of a larger surface area, and it is said that these were the same as used in the Tempest. The prop is four blade, and this makes this depiction that of the most potent Typhoon from the last production block. This is consistent also with the marking options, quite striking, actually, for a late war

British aircraft. All of this promises to make this an extremely quick seller. Along with this kit, we are also releasing its BFC cousin that includes the post war aircraft RB273 ED-B and resin napalm bombs that were carried by this specific aircraft. You can view this item, along with other marking options, later in this newsletter. The BFC Typhoon, known here as the Timpton, are on sale right now. Other BFC items are being worked on including a Swiss Bf 109G-6, Reznak's Bf 109G-4, an SE.5a Night Fighter with a figure and an SPS-141 ECM pod in 1/72nd scale. This last item is intended for the pending MiG-21MF Fighter Bomber.

There are two Limited Edition kits for June. In 1/72nd scale we have something we call 'The Longest Day' and it contains two Spitfire Mk.IXs in two sub-variants, a C and a E, includes invasion markings including that famous 'beer' Spitfire. There was not much left other than dust after the 48th scale version and this one will likely turn out the same.

Germany is represented in the kit releases by the ProfiPack Fw 190A-3 with a four-cannon wing. Of course, this is not the first of the Focke-Wulfs that will help to maintain the interest in these kits and I don't think it requires too long a write-up. Much on these retooled 190s has already been written. Maybe there have been enough of these released already. Every now and then, someone leans into us to start producing something else already. But what can I say? When you have a line prepared, you take as much advantage out of it as you can. Although the proportion of German themed items in our catalogue is growing, it does not constitute a majority. To top it off, a change is coming. By next year, Allied aircraft will be very well represented in our production lists. At the end of the year, it will be in the form the Tempest, next year the Mustang followed by other Spitfires, this time the older versions of the Mk.I, II and V. All of these are in 1/48th scale but these will be interrupted by a 1/72nd scale MiG-21PF and PFM. I can't wait to see who will be the first to accuse us of being monotone, only releasing Spitfires. I don't think we are monotone, and we are constantly striving towards a lively release schedule that includes things like today's release of the Weekend L-29 Delfin. This is a very non-traditional Weekend kit, as it includes someone else's plastic and

a fairly monumental decal sheet. Actually, three sheets. The reason for this is the scheme of one of the options, the famous Zatec Tiger. It is one of the most beautiful Delfins ever, and its release in the Weekend Line demonstrates the fact that this line is by no means worn out despite being the most inexpensive. In comparison to typical competitor's kits, you'll find that the Weekend line is in the same normal category while our other lines always include more. I would also like to point out that Eduard employs one of the originators of this Delfin scheme, Karel Krejci. He took part in the painting of this Tiger just prior to his leaving the service and he has worked at Eduard from the early nineties. Because the Tiger existed in three variations, be assured that this is the first from Zatec and the development of the decal sheet was under the watchful eye of the scheme's author. This is for your information in case you see an inconsistency between the offering on the decal sheet and photographs of one of these birds. In that case, you would also do well to confirm which incarnation is the subject of your reference. And I repeat, there are three versions of this schemes that appeared on two aircraft.

Turning our attention to masks, I like the FI 282 Kolibri in 1/35th scale the most. Its corresponding photoetched sets can be found in the 32nd scale line. But that's my personal choice and from a marketing point of view I expect more from other sets. In the aforementioned 1/35th scale line, I would draw attention to the King Tiger from Takom and two for the Centurion Mk.III from Tamiya. We are paying attention to Tamiya kits in aircraft as well, including the Swordfish in 1/48th with revised sets on the Mk.II. There is also a new mask for their Ki-61 in 1/72nd scale. In 1/32nd scale, we are plating the Special Hobby Tempest Mk.VI in photoetched and the Bü 131D from ICM as well, and these are having their respective mask sets released, too. PE and masks, including the TFace types covering both the inside and outside clear surfaces, are being released for the above mentioned Delfin in the Weekend Line. In 1/72nd scale, we paid a lot of careful attention to the Blenheim Mk.IV from Airfix and the F-35B from Hasegawa. These are the sets that I think deserve further study and these, along with others, are described in today's newsletter.

As we speak, there is a sale going on to coincide with the anniversary of the Invasion that will morph into pre-orders for KitSaloon Nymburk, which this year is being held at Lysa nad Labem. We will of course be there, and for the first time this year, we will be handing out all pre-orders, an honour, as it appears, that will be bestowed on me. In terms of June releases, the main attraction will certainly be the 1/72nd scale MiG-21MF in the Royal Class boxing. At this time, we are putting together its decal sheet, and these will contain some striking options to be sure!

The picture is a tad more bleak for E-day that will follow KitSaloon at the same venue in September. With that, though the venue will become a much sought after destination, and E-day will take place in the same hall, but will cover a larger surface area. We have been preparing the associated events all spring and this is not an easy feat if we are to match last year's event. We are also preparing a collection of new items for October which will be introduced at E-day and which will without a doubt raise the level of interest of the modelling public. Unfortunately, we won't be able to make the deadline to release the tempest by E-day, so it was necessary to find a replacement. Fortunately, our Chinese colleagues at Trumpeter have come through for us that after a period of silence have informed us that the MiG-23ML/MF kits have been moulded. That means that E-day will offer the Box that is the MiG-23MF and ML in Czechoslovak service. The publication is complete, the decals are being designed and all we need is for the box with the container to show up. Other kits under preparation are not a lost cause for E-day either, and these should be the C-10/S-99, these being Czechoslovak Bf 109G-10s and a kit of Czechoslovak SPAD XIII. As you can see, this year's E-day will see a lot of new releases along a Czechoslovak theme to commemorate the 100th anniversary of the founding of the Czechoslovakia. And that is about all I wanted to say today!

Happy Modelling
Vladimir Sulc

SW399, flown by F/O Ronald Sweeting DFC, No. 175 Squadron, No. 121 Wing, B.164 Schleswig, Germany, July 1945

RB431, flown by W/Cdr John 'Zipp' Button DSO, DFC, No. 123 Wing, B.103 Plantlünne, Germany, April 1945

MP197, No. 245 (North Rhodesian) Squadron, No. 121 Wing, B.164 Schleswig, Germany, June 1945

MP197 arrived with No. 245 Squadron at the height of the 'Falaise Gap' operations in Normandy, mid August 1944. It appears that it did not carry the code 'U' at this time but was recoded as MR-U' some time in 1945. It may well have been flown on several operations by Fl/Lt H. T. 'Moose' Mossip RCAF and may have been painted with its 'shark mouth' at this time. Mossip was killed on operations on March 7th, 1945 and there is no information available on its pilots after this date, although S/Ldr Tony Zweigbergk is known to have flown it on occasions. It remained with No. 245 Squadron post war and was photographed at Warmwell during the unit's visit to the APC there in June 1945. When the unit disbanded in Germany it returned to the United Kingdom and was scrapped at 83 GDC in November 1945.

The kit offers MP197 as photographed after the war in Germany with blue/white marking and white serial number. In April 1945 the appearance of the aircraft was slightly different, not so colourful. The spinner was black as well as serial number painted of the fuselage. The white/blue checkered band was still missing. The white patch below the windscreen appears to be a background for some sort of artwork but what this due to be and if it was ever applied is not known.

The close up with the two pilots was taken during the war when the spinner was black. Unfortunately, who actually flew the MP197 remains obscure. Note the u/c doors are still in a factory painting scheme.

MP197 at B.164 airfield in Germany, June, 1945. White/blue spinner, checkered fuselage band and u/c covers are clearly visible.

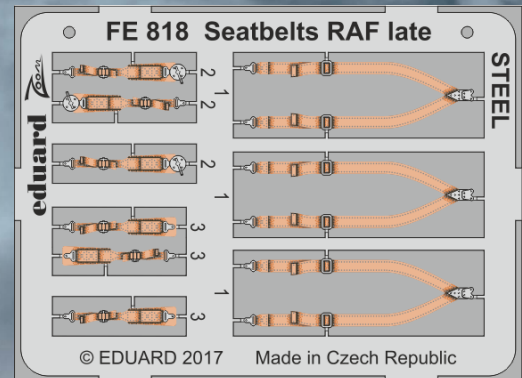

MP197, No. 245 (North Rhodesian) Squadron, No. 121 Wing, April 1945

MiG-21MF

1/72

Camo A

built by Petr Zatrepalek

C/n 96007600, No. 7600, 11. Pułk Lotnictwa Myśliwskiego, Mierzęcice, Poland, early 90'

The aircraft with a production number 96007600 was handed over to the Polish Air Force in December 1975, it was then sent to the 34th Pułk Lotnictwa Myśliwskiego at Gdynia-Babie Doly Base. It then served by other squadrons. From May 13th, 1989 it was used by 2nd Eskadra Lotnictwa Myśliwskiego, located at Mierzęcice Air Base. The 2nd ELM used the plane until October 1998. In 1999, the aircraft was sold to the USA, where it could have been seen until its heavy damage caused by the hurricane in the autumn 2008 in Texas Lone Star Flight Museum in Galveston.

MiG-21MF No. 7600 was painted in aluminium paint with Polish national insignia on the aft surfaces and on the undersides of the wing. The nose of the aircraft had a 2nd ELM sign; its smaller version was painted on the vertical stabilizer. There is an 11th PLM sign behind the red number 7600.

1/72

Camo C

built by Jan Novotny

C/n 96002170, No. 784, Jagdfliegergeschwader 3, Preschen, German Democratic Republic, late 80'

On December 14th, 1954 the 3rd Kommando of the 1st Aeroklub was established in Cottbus; on August 24th 1956, it was renamed to Fliegergeschwader 3. The same year, following the use of training aircraft, Yak-11 and 18, it was equipped with MiG-15s. The first MiG-21s in an F-13 variant went to the first military unit in 1962. On March 1st, 1971 this unit was bestowed on the honorary name after Russian astronaut, Wladimir Komarow, who died in 1967 while performing an emergency landing of a spacecraft. In 1988, a scheduled change of the then used MiG-21MFs for MiG-29s that were substituted by "21s" took place at two out of three Staffels. The camouflage of the Eastern German Aircraft No. 784 is formed by two shades of green on the upper surfaces; the undersides are camouflaged by light blue. Underneath the cockpit there is a so-called Q-mark, a marking of the aircraft, which was in a diligent care of the ground crew.

MiG-21MF

1/72

built by Tomas Török

BFC043

C/n 96005512, No. 5512, 1st Fighter Regiment, České Budějovice, Czechoslovakia, September 1984

The majority of the MiG-21MFs to have served in the Czechoslovak Air Force produced at Factory No.21 in Gorky were attached to the 1st Fighter Regiment based at České Budějovice. As illustrated, it took part in the Stit (Shield) 84 exercises, in which the MiGs with yellow markings served as adversaries flying out of Žatec. Similar markings were worn by six MiG-21MFs, applied by ground crew with temporary paints. Otherwise, the aircraft is painted bluish grey colour, wheel bay were very light gray.
